As per claim 15 " wherein the redirection server is configured to allow automated modification of at least a portion of the rule set correlated to the temporarily assigned network address".

As per claim 26 " modifying at least a portion of the user's rule set while the user's rule set remains correlated to the temporarily assigned network address in the redirection server, and wherein the redirection server has a user side that is connected to a computer using the temporarily assigned network address and a network side connected to a computer network and wherein the computer using the temporarily assigned network address is connected to the computer network through the redirection server and the method further includes the step of receiving instructions by the
